

TRC Commercial Meeting Preparation Tool

User Story Document — derived from Product & AI Implementation Brief v1.1 (client-authored)

This document translates the client's Product & AI Implementation Brief (v1.1) into implementation-ready user stories for the Editorial Research Tool platform. It follows the brief's workflow, structure and wording exactly — no steps, fields, rules or output sections have been added, removed or reinterpreted. Story numbering continues the existing project convention (US-001 to US-020 already cover the core platform; this feature is numbered US-021 onward).

1. Scope

This feature adds a new research module — "Commercial Meeting Preparation" — for TRC sales representatives, alongside the existing research/interview workflow. It covers the full six-step workflow defined in the brief: user input → AI research → internal validation → research review → presentation points → planteo build-up → final meeting preparation document.

Explicitly out of scope for this build (per brief §"Future Scope" — client has scoped these as future phases):

- Advertiser history check automation — no advertiser database exists yet; the sales rep enters this manually (Step, US-023)
- Competitor advertiser history
- CRM integration
- Post-meeting debrief module
- Global FDI Reports variant (second TRC media brand)

Blocking dependency — Appendix A. The brief states the TRC Planteo Build-Up (Appendix A: approved script for both the Company CEO and Government Official variants, with fixed vs. variable sections annotated) "is to be completed by the TRC commercial team before the tool is built." This is the source of truth the Planteo Prompt must follow. **US-029 and US-030 cannot be finished until this content is delivered by the client.** The 35-hour estimate below assumes Appendix A and the Media Library content (positioning, audience/reach, editorial narrative per publication) are supplied before development starts on those stories.

2. Roles

Role	Access
user	Sales rep / commercial team member. Runs the full 6-step workflow for a meeting, reviews and edits research/points/planteo, downloads the final document.
admin	Manages the Planteo Library (both variants) and the Media Library (per-publication profiles) that the workflow depends on. Existing admin-only access pattern applies.

3. User Stories

ID	Area	Story
US-021	Input	Sales rep enters interviewee and meeting details and starts a new meeting prep
US-022	Input	System auto-loads the correct planteo variant and media profile; halts if none exists
US-023	Research	Sales rep manually records advertiser history before research proceeds (Phase 1)
US-024	Research	AI researches the interviewee and organisation with sourced, dated findings
US-025	Research	AI ranks commercial motivation profiles with evidence
US-026	Research	AI internally validates research coherence before showing it to the user
US-027	Review	Sales rep reviews, edits, accepts or regenerates research by section via chat panel
US-028	Points	AI generates 3 presentation points; sales rep edits/regenerates and approves
US-029	Planteo	AI generates the planteo build-up from the approved library; sales rep edits/approves
US-030	Output	System generates the final meeting preparation document in fixed section order
US-031	Quality	System runs an automated quality check before the document is presented
US-032	Admin	Admin manages the Planteo Library and Media Library

4. Story Detail & Acceptance Criteria

US-021 **Input** **As a sales rep, I can enter meeting details and start a new preparation**

ACCEPTANCE CRITERIA

- Form captures: interviewee name, title/position, interviewee type (Company CEO / Government Official), company or organisation name, country of the company, publication, country of publication
- Interviewee type is a required single choice between exactly the two listed options
- Workflow cannot proceed to Step 2 until all fields are completed

US-022 **Input** **As the system, I auto-load the correct planteo variant and media profile, or halt cleanly**

ACCEPTANCE CRITERIA

- On submission, the system looks up the Media Library entry for the selected publication and the Planteo Library variant matching the selected interviewee type
- If a media profile exists: it and the correct planteo variant load automatically, no user action required
- If no media profile exists for the selected publication: the system alerts the user with a clear message and halts — no research is generated, no API cost is incurred

US-023 **Research** **As a sales rep, I record advertiser history manually before research starts**

ACCEPTANCE CRITERIA

- Before AI research begins, the sales rep is prompted to state whether this company/organisation has previously advertised with TRC
- If yes: publication, advertising space and approximate period are captured as free text
- If no: this is recorded explicitly as "no previous history"
- This entry is carried into the Commercial Alert block of the final document unchanged (US-030)
- Scoped as the Phase 1 manual interim per the brief — automatic advertiser database lookup is out of scope (Phase 2, not yet defined)

US-024 **Research** **As the system, I generate sourced interviewee and organisation research via the Research Prompt**

ACCEPTANCE CRITERIA

- Research Prompt runs first and independently — it does not generate presentation points or planteo content
- Interviewee dimensions covered: professional background/career trajectory, role in growth of current and (if applicable) previous organisations, stated vision and values, public positions on investment/growth/international markets, awards/recognitions, 2–3 recent quotes, 2–3 recent news items
- Organisation dimensions covered: size/turnover, growth over time, market positioning and rank/share, top-50/top-100 standing and notable recognitions, competitive edge, growth strategy, investment strategy, international operations, ties to the country of publication, any information relevant to TRC's business/investment editorial narratives
- Every factual claim carries a visible source; unsourced claims are flagged explicitly, never silently dropped
- Source priority order and recency thresholds from the brief are enforced (financial/market data $\leq$ 24 months, biographical $\leq$ 5 years, quotes/news $\leq$ 12 months where possible; older data allowed only if labelled with its date)
- No negative, corrosive or reputationally damaging content is surfaced; a mildly challenging fact is included only if framed constructively and it does not undermine the commercial objective

US-025 **Research** **As the system, I rank commercial motivation profiles with supporting evidence**

ACCEPTANCE CRITERIA

- All six standard profiles are assessed: international market access, investment attraction, sector leadership & competitive positioning, nation brand & FDI attraction (Government Officials only), legacy & personal reputation, sector/country advocacy
- Profiles are ranked most-to-least relevant to this specific interviewee, based on the research generated in US-024
- Each included profile carries exactly one sentence of supporting evidence drawn from the research
- Profiles with no supporting evidence are excluded entirely, not shown as "not applicable"

US-026 **Research** **As the system, I validate research coherence internally before showing anything to the user**

ACCEPTANCE CRITERIA

- This step is never visible to the user — no UI, no output
- Before presenting research, the AI checks: a clear editorially-and-commercially grounded "why now"; connection to the publication's editorial narrative; enough substantive facts for three genuinely distinct presentation points; an evident bilateral connection to the country of publication; at least one evidenced strong motivation profile; quotes/news strong enough to reference naturally in conversation
- If any check fails, the AI deepens or reframes the research automatically and re-runs validation before the Research Review screen (US-027) loads

US-027 **Review** **As a sales rep, I review, edit, accept or regenerate research section by section**

ACCEPTANCE CRITERIA

- Research is presented as structured, editable sections matching the research categories (interviewee, organisation, motivation ranking, quotes & news, advertiser history)
- Per section: Accept, Edit directly, or Request regeneration with a refinement prompt
- A persistent chat panel lets the sales rep redirect research with free-text instructions (e.g. "focus more on their international expansion plans")
- Regenerating or refining any section updates only that section — all previously accepted sections are preserved untouched
- The workflow cannot advance to Step 5 (US-028) until the sales rep has accepted or edited every section

US-028 **Points** **As a sales rep, I get 3 presentation points and must approve them before the planteo is built**

ACCEPTANCE CRITERIA

- Presentation Points Prompt runs only after all research sections are accepted, and draws exclusively from the approved research and ranked motivation profiles — no new facts are introduced
- Exactly 3 points are generated, each: genuinely distinct from the other two, grounded in the approved research, relevant to the publication's editorial narrative, tied implicitly (never labelled) to one or more ranked motivation profiles, phrased for speech, one to three sentences maximum
- Sales rep can edit each point individually, regenerate any single point, or request all three be reframed
- The planteo generation step (US-029) is disabled/unreachable until all 3 points are explicitly approved

US-029 **Planteo** **As a sales rep, I get a planteo build-up generated from the approved library and points**

ACCEPTANCE CRITERIA

- Planteo Prompt runs only after the 3 presentation points are approved
- Correct variant (Company CEO or Government Official) is auto-selected from the interviewee type entered in US-021 — no manual selection needed
- Generated planteo weaves in the 3 approved points and activates the ranked motivation profiles implicitly — never as a direct or overt pitch
- Structure is a hybrid: one short spoken opening paragraph, followed by structured bullet-point cues — matching the approved Planteo Library formula exactly (Appendix A); the AI does not improvise structure outside it
- No fact, claim or figure appears in the planteo that was not present in the approved research
- Sales rep can edit the planteo directly or request targeted regeneration of any section
- *Depends on Appendix A being delivered — see §1 Blocking dependency*

US-030 **Output** **As a sales rep, I generate and download the final meeting preparation document**

ACCEPTANCE CRITERIA

- Generation is only reachable once the planteo (US-029) is approved
- Single document, sections in this fixed order: Commercial Alert (always first) → Interviewee & Company Snapshot (5–6 bullets) → Motivation Profile Ranking (evidenced, ranked) → What They've Said Recently (2–3 quotes + 2–3 news items, sourced/dated) → 3 Presentation Points (no motivation labels shown) → Planteo Build-Up
- Commercial Alert reflects the advertiser history captured in US-023 exactly, and is visible regardless of advertiser status (yes or no history)
- Default length is 3 pages; may extend to 4 only if research quality genuinely justifies it; the AI does not pad length; thin research may produce 2 pages
- Exported as a Word (.docx) document on the TRC document template

US-031 **Quality** **As the system, I run an automated quality check before the document reaches the user**

ACCEPTANCE CRITERIA

- Before final output, the system verifies: every factual claim has a visible source; the Commercial Alert block is present and complete; motivation profiles are ranked and each has at least one supporting finding; no motivation is stated overtly; no claim in the planteo is absent from the approved research; the 3 presentation points are genuinely distinct; the correct planteo variant was applied; all quotes are sourced and dated; no negative/corrosive/reputationally damaging content is present; tone reads as conversational/verbal; the document does not exceed 4 pages
- A failed check triggers automatic correction before the document is presented — the user is never shown a document that fails this checklist

US-032 **Admin** **As an admin, I manage the Planteo Library and Media Library that the workflow depends on**

ACCEPTANCE CRITERIA

- Planteo Library: stores the approved build-up text for both variants (Company CEO, Government Official), with fixed (locked) vs. variable sections annotated per Appendix A; admin can update the text; the brief requires that any update to the source planteo document is logged as a change
- Media Library: for every TRC publication, stores positioning statement, audience & reach, editorial narrative focus, and country of publication; admin can create/edit entries
- A publication with no Media Library entry is exactly what triggers the halt condition in US-022

5. Effort Estimate

Total development time: **35 hours**, allocated as follows.

Story	Scope	Hours
US-021	Input form: fields, validation, interviewee-type selector	2
US-022	Media profile / planteo variant auto-load, halt-and-alert path	2
US-023	Manual advertiser history capture (Phase 1 interim)	1
US-024	Research Prompt: sourcing, recency, editorial-orientation rules	6
US-025	Commercial motivation profiling (ranked, evidence-gated)	3
US-026	Internal narrative validation pass (invisible re-check/reframe loop)	3
US-027	Research review UI: per-section accept/edit/regenerate + chat panel	5
US-028	Presentation points generation, edit/regenerate, approval gate	3
US-029	Planteo generation from library, variant logic, approval gate	3
US-030	Final document assembly (fixed order) + Word export	4
US-031	Automated pre-output quality checklist	2
US-032	Admin CRUD: Planteo Library + Media Library	1
Total		35

Estimate assumes: (1) Appendix A planteo scripts and Media Library content are supplied by the client before US-029/US-030/US-032 start; (2) this module is built as a new workflow alongside the existing research/document generation modules, reusing the platform's existing prompt-versioning, streaming generation and Word-export patterns rather than building new infrastructure from scratch; (3) Advertiser Database (Phase 2) and all items listed under "Future Scope" in the brief remain out of scope.

Source: TRC Commercial Meeting Preparation Tool — Product & AI Implementation Brief, Version 1.1 (client-authored). This user story document introduces no requirements beyond that brief.
