THE REPORT COMPANY · AI PLATFORM · USER STORIES · 12 OCTOBER 2026

Commercial Presentation Generator

A standardised commercial presentation for each project, combining TRC's approved methodology, Agency and Media content, an AI-generated Why [Country] Now and the team's project inputs. It is approved and locked by a Manager/Admin before use, then exported to Word and PDF for rehearsal.

Based on the TRC Commercial Presentation Generator developer brief (26 September 2026) and its generic output template. Covers the full scope requested in the brief.

USER STORIES	ROLES	ESTIMATED EFFORT
41 · US-128 – US-168	**Commercial Executive, Admin**	**65 hours**

Roles

ROLE	ACCESS
Commercial Executive	Creates presentations; generates, regenerates and edits Why Country Now; fills in manual project inputs; submits for approval; exports. Read-only on Master Content and Locked Methodology.
Admin (incl. Manager)	Everything a Commercial Executive can do, plus Approve, Edit and Approve, or Return for Changes on any presentation (including their own), and manages Agency Profiles, Media Profiles, Locked Methodology, Commercial Master Language and Approved Reference Examples.

User stories — summary

User stories & acceptance criteria

ACCESS

US-128 ACCESS

Module access per user

As **an Admin**, *I want to grant or remove access to the Commercial Presentation Generator for each user, so that only the commercial teams who need it can use it.*

ACCEPTANCE CRITERIA

- Admin can switch access on or off for any user, and when inviting a new user
- Users without access don't see the module and can't open it through a direct link
- Admins always have access

MASTER CONTENT (ADMIN)

US-129 AGENCY

Agency Profiles

As **an Admin**, *I want to create and maintain an Agency Profile with the approved wording used to introduce each agency, so that every executive introduces the agency in exactly the same way.*

ACCEPTANCE CRITERIA

- Starts with The Report Company and Global FDI Reports; Admin can add further agencies
- Wording supports the variables [AGENCY], [COUNTRY], [MEDIA] and [ANCHOR EVENT]
- Only Admin can change it; AI never rewrites it
- An agency already used in presentations can be archived but not deleted

US-130 MEDIA

Media Profiles

As **an Admin**, *I want to create and maintain a Media Profile for each media partner, so that Block 3 always uses accurate, approved information about the publication.*

ACCEPTANCE CRITERIA

- Fields: media name, Media Market, short positioning, audience, reach, print distribution, digital distribution, demographics, geographic coverage, digital products, podcast availability, other channels, approved facts and statistics, materials to show
- Includes the approved Block 3 script as SAY and ACTION entries
- Starts with USA Today, Foreign Policy, Newsweek, WELT, The Guardian and Gulf News
- Only Admin can change it; AI never invents or rewrites media facts
- A media partner without an approved script can't be selected for a new presentation

US-131 MEDIA

Media Market

As **an Admin**, *I want to set the Media Market once on each Media Profile (e.g. USA Today → USA, WELT → Germany), so that the presentation and the Why Country Now section always use the right market.*

ACCEPTANCE CRITERIA

- Required field on every Media Profile
- Filled in automatically wherever [MEDIA MARKET] appears and passed to the Why Country Now generation

US-132 METHODOLOGY

Locked Methodology

As **an Admin**, *I want to maintain TRC's locked methodology wording for Block 1 (Chit Chat and Seating) and Block 6 (Transition to Interview), so that the meeting choreography is the same in every project.*

ACCEPTANCE CRITERIA

- Written as SAY and ACTION entries, pre-filled with the wording from the brief
- Normal users can read it but can't edit or regenerate it

US-133 LANGUAGE

Commercial Master Language

As **an Admin**, *I want to maintain the protected commercial wording used in Blocks 2 and 5, so that core commercial language is never rewritten by AI or individual executives.*

ACCEPTANCE CRITERIA

- Covers the Block 2 introduction (with and without Anchor Event), the Block 5 mockup script, the Commercial Transition and the tourism closing line
- Supports variables such as [MEDIA], [COUNTRY], [MEDIA MARKET], [MAIN INTERVIEW], [INVESTMENT ANGLE] and [MAIN SECTORS]
- Only Admin can change it

US-134 EXAMPLES

Approved Reference Examples

As **an Admin**, *I want to upload and classify 10–20 strong historical presentations and Interview Request Letters as Approved Reference Examples, so that the AI learns TRC's tone, rhythm and editorial reasoning.*

ACCEPTANCE CRITERIA

- Upload Word, PDF or text files
- Classify each by project type: major international event, bilateral relations, investment story, economic reform, geopolitical development, strategic industry, trade agreement, major investment announcement, no obvious anchor event
- Examples can be deactivated without being deleted

US-135 HISTORY

Master Content version history

As **an Admin**, *I want to see the history of every Master Content item, so that I know who changed what and can go back to an earlier version.*

ACCEPTANCE CRITERIA

- Shows current version, last modified by and date modified
- Previous versions can be viewed and restored
- Changing or restoring Master Content never alters an already approved presentation

CREATING A PRESENTATION

US-136 CREATE

Create a presentation

As **a Commercial Executive**, *I want to create a presentation by selecting Agency, Media and Project, so that I start from the right approved content for my project.*

ACCEPTANCE CRITERIA

- Agency and Media are chosen from the Admin-managed lists
- Project is selected from existing projects or created with its name and country; country is never asked for separately
- Media Market is filled in automatically from the Media Profile
- If a presentation already exists for the same Project, Agency and Media, the user is taken to it instead of creating a duplicate

US-137 RETRIEVE

Master Content retrieved automatically

As **a Commercial Executive**, *I want to see the Agency, Media and Locked Methodology content pulled in as soon as I create the presentation, so that I don't have to copy or rewrite approved content.*

ACCEPTANCE CRITERIA

- Content appears immediately, with no AI generation involved
- Creation is stopped with a clear message if the selected Agency or Media is missing approved content

US-138 PROJECT INTELLIGENCE

Fetch or generate the Editorial Brief

As **a Commercial Executive**, *I want to have the system use the project's Editorial Brief, or generate one if it doesn't exist, so that Why Country Now is built on TRC's own editorial research.*

ACCEPTANCE CRITERIA

- If an Editorial Brief exists for the project it is retrieved; the user can choose a different one if needed
- If none exists, one is generated with the existing Editorial Brief functionality and saved to the project
- The screen shows "Editorial Brief ✓ Retrieved" or "Editorial Brief ✓ Generated", with a link to it
- If generation fails, a clear error is shown with a Retry option

US-139 PROJECT INTELLIGENCE

Fetch or generate the Interview Request Letter

As **a Commercial Executive**, *I want to have the system use the project's Interview Request Letter, or generate one if it doesn't exist, so that the editorial rationale, timing and angles from the letter feed Why Country Now.*

ACCEPTANCE CRITERIA

- If an Interview Request Letter exists for the project it is retrieved
- If none exists, one is generated with the existing Interview Request Letter functionality and saved to the project
- The screen shows "Interview Request Letter ✓ Retrieved" or "✓ Generated"
- If generation fails, a clear error is shown with a Retry option; the rest of the presentation stays usable

US-140 PROJECT INTELLIGENCE

Approved Project Research and Reference Examples

As **a Commercial Executive**, *I want to have approved project research and relevant reference examples used automatically, so that the AI has the best available context for the project.*

ACCEPTANCE CRITERIA

- Approved project research is retrieved where available, and users can attach additional research documents
- The most relevant Approved Reference Examples are selected by project type
- Research is used as fact; Reference Examples are used for style only (US-166)

US-141 LANGUAGE

Presentation language

As **a Commercial Executive**, *I want to have presentations generated in English by default, so that the tool works now and can support Spanish and French later through the platform's language functionality.*

ACCEPTANCE CRITERIA

- Every presentation records its language, defaulting to English
- Built so additional languages can be added later without rebuilding the module

MANUAL PROJECT INPUTS

US-142 INPUT

Anchor Event, Relevant Date and Additional Context

As **a Commercial Executive**, *I want to optionally enter an Anchor Event / Editorial Momentum, a Relevant Date and Additional Context, so that the AI builds the argument around what I know matters for this project.*

ACCEPTANCE CRITERIA

- All three fields are optional
- Generation works when all three are left blank
- The Anchor Event also decides the Block 2 wording (US-154)

US-143 INPUT

People to mention / show

As **a Commercial Executive**, *I want to enter the people to name-drop and the photographs to show in Block 2, so that I decide which names will have the greatest impact.*

ACCEPTANCE CRITERIA

- Free-text field, filled in manually
- The system never suggests or inserts names automatically
- Shown under the Block 2 ACTION in the platform and in the exports

US-144 INPUT

Mockup information

As **a Commercial Executive**, *I want to enter Main Interview, Investment Angle, Main Sectors and Other Relevant Section, so that the Block 5 mockup walkthrough matches the actual mockup I'm showing.*

ACCEPTANCE CRITERIA

- Main Interview, Investment Angle and Main Sectors are required before submitting for approval; Other Relevant Section is optional
- Inserted into the approved script exactly as entered, never rewritten by AI

WHY [COUNTRY] NOW

US-145 GENERATE

Generate Why Country Now

As **a Commercial Executive**, *I want to generate a 45–60 second spoken Why Country Now, so that I can give the interviewee a few strong editorial reasons why the report is relevant now.*

ACCEPTANCE CRITERIA

- Uses the source hierarchy: user input → Editorial Brief → Interview Request Letter → Approved Project Research → Approved Reference Examples → fresh external research
- Uses the dedicated Why Country Now prompt from the brief, which Admin can refine
- Output has two parts: the Spoken Version and New External Facts Requiring Review
- Normally 2–4 substantive editorial points, connecting the country with the Media Market

US-146 GENERATE

Works without an Anchor Event

As **a Commercial Executive**, *I want to get a strong Why Country Now even when I don't supply an Anchor Event, so that generation never depends on me finding a hook.*

ACCEPTANCE CRITERIA

- The AI identifies the strongest Why Now from the project information
- With no single dominant event, it combines the strongest two or three developments
- It never invents an event to create a hook, and may set aside a supplied anchor only if another argument is materially stronger

US-147 RESEARCH

Check for Recent Developments

As **a Commercial Executive**, *I want to choose "Check for Recent Developments" when generating, so that the argument reflects anything important that happened recently.*

ACCEPTANCE CRITERIA

- Optional per generation; off by default
- Fresh research uses reliable sources only; existing TRC project research remains the primary source

US-148 REVIEW

New External Facts Requiring Review

As **a Commercial Executive**, *I want to see any new facts from external research listed separately with their sources, so that the team and Admin can check them before the presentation is approved.*

ACCEPTANCE CRITERIA

- Shown as a separate section, or "None" if no new facts were used
- Visible during editing and on the approval screen; never part of the spoken text
- No separate accept/reject step; reviewed as part of normal approval

US-149 QUALITY

Spoken, natural writing

As **a Commercial Executive**, *I want to have Why Country Now written the way a strong TRC executive speaks, so that I can learn it and deliver it naturally from memory.*

ACCEPTANCE CRITERIA

- Conversational, simple sentences, selective statistics; no headings, bullet points, sources or jargon in the spoken text
- Avoids clichés and generic AI phrases such as “at the crossroads”, “dynamic economy” and “exciting opportunities”
- Future dates use conditional language (“we aim to publish around…”), never an unconditional commitment
- Never invents facts, dates, investments, agreements, attendees, meetings or publication commitments
- Shows a warning if the text is noticeably shorter or longer than 45–60 seconds

US-150 ITERATE

Regenerate and Generate Alternative

As **a Commercial Executive**, *I want to regenerate Why Country Now or generate an alternative as many times as I need while in Draft, so that I can experiment freely before seeking approval.*

ACCEPTANCE CRITERIA

- Regenerate replaces the current version; Generate Alternative keeps both so they can be compared
- No Manager/Admin approval needed while in Draft

US-151 ITERATE

Edit, return to a previous version, select preferred

As **a Commercial Executive**, *I want to edit the text directly, return to a previous version and select my preferred version, so that the final wording is exactly what I want to say.*

ACCEPTANCE CRITERIA

- Direct edits are saved immediately
- Any earlier version can be restored
- One version is always marked as the selected version used in the presentation

US-152 HISTORY

Previous generations kept

As **a Commercial Executive**, *I want to see all previous Why Country Now generations, so that nothing useful is lost when I regenerate.*

ACCEPTANCE CRITERIA

- Each generation is kept with its inputs, author and date
- Shown as a simple list in the Draft view

ASSEMBLY & SAY / ACTION

US-153 ASSEMBLY

Six-block presentation

As **a Commercial Executive**, *I want to see the complete presentation assembled in the standard six blocks, so that I can review the whole presentation as one coherent document.*

ACCEPTANCE CRITERIA

- Block 1 Chit Chat and Seating · Block 2 Presenting Ourselves · Block 3 The Media and the Product · Block 4 Why [Country] Now · Block 5 Presenting the Mockup · Block 6 Transition to Interview
- Each block uses its content type from the brief; only Block 4 is AI-generated

US-154 LOGIC

Block 2 Anchor Event wording

As **a Commercial Executive**, *I want to have Block 2 automatically use the right introduction depending on whether there is an Anchor Event, so that the agency introduction always reads correctly.*

ACCEPTANCE CRITERIA

- With an Anchor Event: "…that we aim to publish in [MEDIA] around [ANCHOR EVENT]."
- Without an Anchor Event: "…that we aim to publish in [MEDIA]."
- Chosen automatically by template logic, never written by AI

US-155 LAYOUT

SAY and ACTION clearly distinguished

As **a Commercial Executive**, *I want to see SAY and ACTION clearly distinguished in every block, so that I learn both the language and the choreography of the presentation.*

ACCEPTANCE CRITERIA

- SAY shown as the spoken words; ACTION shown as a distinct instruction
- The distinction is kept in the Word and PDF exports

APPROVAL & LOCKING

US-156 WORKFLOW

Submit for approval

As **a Commercial Executive**, *I want to submit the complete presentation for approval, so that a Manager/Admin can sign it off for use.*

ACCEPTANCE CRITERIA

- Available once the required fields are complete and a Why Country Now version is selected
- Editing and generation are paused while it is awaiting approval

US-157 WORKFLOW

Approve, Edit and Approve, Return for Changes

As **an Admin**, *I want to approve, edit and approve, or return a submitted presentation for changes, so that only quality-checked presentations are used in meetings.*

ACCEPTANCE CRITERIA

- Approval applies to the complete presentation, not each paragraph
- Admin can approve a presentation they created or edited themselves
- Return for Changes includes an optional note and keeps everything already entered

US-158 SNAPSHOT

Lock and snapshot on approval

As **an Admin**, *I want to have the approved presentation locked and saved exactly as approved, so that the version used in meetings can never change silently.*

ACCEPTANCE CRITERIA

- Marked APPROVED 🔒 and no longer editable
- Saves the complete presentation text plus the versions of all Master Content used
- Records who approved it and when

US-159 MASTER CONTENT

New Master Content Available

As **a Commercial Executive**, *I want to be told when Master Content used in my approved presentation has been updated, so that I can decide whether to bring the presentation up to date.*

ACCEPTANCE CRITERIA

- The approved presentation keeps its original content and is never updated automatically
- Shows “New Master Content Available” when a newer version of any Master Content it uses exists
- Choosing to update returns the presentation to Draft, and it must be approved again

US-160 WORKFLOW

Reopen for revision

As **a Commercial Executive**, *I want to reopen an approved presentation if circumstances change, so that the presentation stays current throughout the project.*

ACCEPTANCE CRITERIA

- Reopening creates a revised Draft
- The previously approved version stays in use and exportable until the revision is approved

US-161 HISTORY

Presentation history

As **a Commercial Executive**, *I want to see the history of a presentation, so that it’s clear who created, edited and approved it.*

ACCEPTANCE CRITERIA

- Shows created by/date, last edited by/date, submitted, returned and approved by/date
- Each approved version is kept as part of the revision history

EXPORT

US-162 EXPORT

Export to Word

As **a Commercial Executive**, *I want to export the presentation to Word, so that I can print it and use it for rehearsal.*

ACCEPTANCE CRITERIA

- Clean, easy to scan and print, clearly divided into the six blocks
- SAY and ACTION clearly distinguished
- Approved presentations export as approved; drafts export marked “Draft — not approved”

US-163 EXPORT

Export to PDF

As **a Commercial Executive**, *I want to export the presentation to PDF, so that I can share and print a fixed copy.*

ACCEPTANCE CRITERIA

- Same content and layout as the Word export

GUARDRAILS

US-164 LIMITS

Usage checked before generation

As **a Commercial Executive**, *I want to be told before generating if I have reached my usage limit, so that no cost is incurred on a generation that can't run.*

ACCEPTANCE CRITERIA

- The check happens before any AI call
- A clear message explains why generation is blocked

US-165 PROJECT

One presentation per project

As **a Commercial Executive**, *I want to use the same approved presentation for every meeting in the project, so that I don't have to regenerate it for each CEO or company.*

ACCEPTANCE CRITERIA

- Presentations are created at project level only, with no CEO-specific version
- Individual CEO/company preparation stays in Meeting Prep

US-166 EXAMPLES

Reference Examples used for style only

As **an Admin**, *I want to be sure Reference Examples are never used as factual sources, so that facts from other projects never appear in a new presentation.*

ACCEPTANCE CRITERIA

- The AI is explicitly instructed never to copy facts, people, events, companies, investments or country-specific arguments from an example
- Examples are left out entirely when none are relevant

US-167 PROTECTION

Master Content protected from project edits

As **an Admin**, *I want to be sure editing a presentation never changes Master Content, so that approved institutional content stays exactly as Admin wrote it.*

ACCEPTANCE CRITERIA

- Project-specific edits apply only to that presentation
- An approved presentation can only be replaced through a new approval

US-168 ANALYTICS

Generations logged in analytics

As **an Admin**, *I want to see every Why Country Now generation in the usage analytics, so that I can monitor usage and cost.*

ACCEPTANCE CRITERIA

- Each generation and regeneration is logged with user, tokens, cost and any error
- Shown alongside the platform’s other modules in Analytics
